

Thomas Butman

Senior Software Engineer · Full-stack and product

Lisbon, Portugal | US citizen | tbutman@gmail.com | tbutman.com | github.com/tbutman |
linkedin.com/in/thomasbutman

SUMMARY

Senior product engineer with ten years in fintech and deep React experience. I owned the frontend across DigitalPay's payment applications, and now build full-stack products from data model through deployment. Open to remote roles with US companies or on-site in Lisbon, full-time or contract. Works US business hours.

EXPERIENCE

Software Engineer, Freelance

Remote | 2025 – Now

- Built an ACH payment flow that collects recipient bank and address details, as composable, embeddable React components that can be extended to new payment networks.
- Added single sign-on with social and enterprise identity providers alongside the existing password login.

Technologies: React, Okta/Auth0, Google Places API, Storybook

Senior Software Engineer, DigitalPay

San Francisco, CA | 2019 – 2025

- Owned frontend development for all core applications: customer-facing payment products, internal tools and sales demos, used by millions of recipients and processing hundreds of millions of dollars in payments.
- Remained the sole frontend engineer as the team shrank from 22 people to 6, maintaining the core applications and shipping their frontend features.
- Shipped payout experiences that let recipients choose from more than 250 payment options, including direct-to-bank, digital debit card, wallet balance and gift cards.
- Built a shared component library used across company applications, with per-customer theming.

Technologies: React, AWS, Storybook, Webpack

Software Engineer, Sipree

San Francisco, CA | 2016 – 2019

- Led development of the recipient portal, a payment flow whose layout, networks and steps are driven by JSON config from a REST API.
- Built an admin console for managing program configuration, users, roles and cash-flow reporting across environments.
- Worked directly with the sales team to build configurable product demos, including image recognition with AWS Rekognition and Lambda.

Technologies: React, Redux, AWS Lambda, API Gateway, Material-UI

Study Management Associate, Allergan

Irvine, CA | 2007 – 2015

- Automated bulk document imports with scripting, raising throughput from about 100 documents a day to 2,300.
- Completed a BA and computer science coursework while working full time.

PROJECTS

PepAlert (pepalert.com)

Live · early access

- A live price-comparison product that tracks pricing, stock and lab reports across hundreds of vendor channels, with alerts, an order optimizer and chat bots.

Technologies: Next.js, TypeScript, SQLite, Drizzle, Claude API, Stripe

Smart Shopping

Working v1 · runs locally

- A barcode-driven household shopping system: one authoritative backend, offline-first device clients and a full hardware simulator.

Technologies: TypeScript, Fastify, SQLite, React, Playwright

Chatlingo

Working prototype · not currently deployed

- Upload a WhatsApp export and read it in your language, with voice notes transcribed and translated in place.

Technologies: React, Express, Postgres, Whisper, Drizzle

SKILLS

- **Frontend:** TypeScript, React, Next.js, Redux, Tailwind CSS, Storybook, Vite, Webpack, accessibility
- **Backend:** Node.js, Express, Fastify, REST APIs, Python/Flask, OAuth and SSO
- **Data:** PostgreSQL, SQLite, Drizzle ORM, DynamoDB, MongoDB
- **Infrastructure and testing:** AWS (Lambda, S3, API Gateway), Docker, CI, Vitest, Playwright, Mocha
- **AI:** Claude Code, Codex, Anthropic and OpenAI APIs, Whisper
- **Embedded:** C++, ESP32, Arduino, OTA updates

EDUCATION

- **MakerSquare**, Software engineering immersive
- **Irvine Valley College**, Computer science coursework
- **National University**, BA, Interdisciplinary Studies
